

Project Title: Business Analytics Chatbot using RAG

Business Problem: Users spend a significant time browsing the dashboard and documents for Business analytics and insights.

Objectives: Build a Chatbot which can retrieve data from business data and documents and answer user's queries efficiently.

Target users: Business analysts, managers, executives, employees who need access to business insights.

Data Sources: Tesla's Annual and Quarterly Reports

Key features:

- Natural Language question answering
- Context aware responses
- Business data retrieval using RAG
- Business explanations

Success Metrics:

- Accuracy $\geq 85\%$
- Response time ≤ 3 secs
- Retrieve relevant documents

Scope: That chatbot will only answer queries and retrieve data from the documents and business data provided to it. It will not answer questions out of its knowledge base.
